

HOW IT WORKS

Nourisil™ MD

Silicone Scar Gel

Claim	Justification of claim
Nourisil™ MD treats and prevents keloids and (hypertrophic) scars after the wound has healed and the skin surface is intact.	Multiple RCTs have shown the efficacy of silicones in the treatment of and prevention of keloids and hypertrophic scars.
Nourisil™ MD is proven to flatten, soften and smooth scars, relieve the itching, pain and discomfort of scars and reduce any associated redness.	Multiple RCTs have shown that silicone gel is able to flatten, soften and smooth scars. Moreover, they have shown to relieve itching, reduce the pain, redness and discomfort caused by scars.
Nourisil™ MD helps to maintain the skin's hydration balance.	The treatment with silicone gel provides occlusion and by this mechanism decreases the evaporation of water from the skin and increases the hydration of the stratum corneum.
Nourisil™ MD contains safe ingredients.	Nourisil™ MD has a safe ingredient selection, based on literature references for ingredients safety.
Nourisil™ MD can be used for all patients, including children.	Case reports have reported safe use in children, moreover it has been advised in several pediatric hospital guidelines.
